

Understanding Cohesion & Coupling through Implementation

Coupling	Cohesion
Content Coupling (High)	Coincidental Cohesion (Lowest)
Common Coupling	Temporal Cohesion
External Coupling	Logical Cohesion
Control Coupling	Sequential Cohesion
Stamp Coupling	Functional Cohesion
Data coupling (Low)	Procedural Cohesion
	Layer Cohesion
	Communication Cohesion

How to decide order of coupling?

- (H) Content Coupling: Worst type; direct access to internal data.
- Common Coupling: Global variables shared across modules.
 - External Coupling: Dependence on external resources.
 - Control Coupling: Control flags dictate behavior.
 - Stamp Coupling: Passing whole data structures.
- (L) Data Coupling: Ideal; using atomic data types.
